Projects

LaraNaukri - Live Demo - Github

Laranaukri is a **modern**, **mobile-friendly**, and AI**-powered Job Portal** System built with **Laravel 12, Inertia.js, React 18+, and Filament 4**.

It delivers a full recruitment ecosystem for Job Seekers, Job Providers, and Administrators — enhanced by AI-driven automation, a responsive mobile-friendly design, and a powerful Filament admin interface.

- Job Seeker Module – Manage all details of job seekers — including professional profiles, education, skills, and resumes.
- Employers can efficiently manage job postings and candidates using a comprehensive dashboard.
- Admin Panel – The Filament Admin Panel offers a sleek and powerful backend for full platform management.
- Laranaukri integrates AI capabilities via Hugging Face APIs to automate and personalize user experiences.

LaraCom - Live Demo - Github

Laracom is a **modern eCommerce platform** built with **Laravel, Inertia.js, React**, and **Typescript** featuring a sleek Filament admin dashboard

- Product Management – Browse products with category and price filters
- Customer Auth – Register, login, and place orders
- Validation – Secure server-side validation using Laravel
- Dashboard Widgets – At-a-glance stats for products, orders, and customers

LaraRental - Live Demo- Github

LaraRental is a modern and efficient property rental management system created for UAE-based client and built with **Laravel**, **Filament**, and **Inertia/React**

- Built modules to manage properties, tenants, rental agreements, and monthly rent collection.
- Implemented an **income and expense tracking** system with financial summaries to monitor property profitability.
- Developed an admin dashboard with **Filament** for efficient property, tenant, and financial data management.
- Designed responsive user interfaces with **React** and integrated them with Laravel APIs to provide a seamless user experience.
